**Peltophorum pterocarpum**

Yellow Poinciana

Edward F. Gilman and Dennis G. Watson

**INTRODUCTION**

This upright, handsome, spreading, semievergreen tree has a rounded canopy and is capable of reaching 50 feet in height with a 35 to 50-foot spread (Fig. 1). Form can be quite variable from tree to tree, unfortunately, eliminating this plant from the palette of many architects. With proper training and pruning in the nursery and in the landscape, a more uniform crown will develop. The dark green, delicate, feathery leaflets provide a softening effect for the tree’s large size and create a welcoming, dappled shade. From May through September, the entire tree’s canopy is smothered with a yellow blanket of flowers, appearing in showy, terminal panicles and exuding a delicious, grape-like perfume. These flower clusters are followed by four-inch-long seed pods which ripen to a brilliant, dark, wine-red.

**GENERAL INFORMATION**

**Scientific name:** Peltophorum pterocarpum  
**Pronunciation:** pell-TOFF-oh-rum teer-oh-KAR-pum  
**Common name(s):** Yellow Poinciana  
**Family:** Leguminosae  
**USDA hardiness zones:** 10 through 11 (Fig. 2)  
**Origin:** not native to North America  
**Uses:** recommended for buffer strips around parking lots or for median strip plantings in the highway; reclamation plant; shade tree; specimen; no proven urban tolerance  
**Availability:** somewhat available, may have to go out of the region to find the tree

**DESCRIPTION**

**Height:** 40 to 50 feet  
**Spread:** 30 to 40 feet  
**Crown uniformity:** irregular outline or silhouette  
**Crown shape:** round; spreading; vase shape  
**Crown density:** open  
**Growth rate:** fast  
**Texture:** fine

**Foliage**

**Leaf arrangement:** alternate (Fig. 3)  
**Leaf type:** bipinnately compound; even pinnately compound  
**Leaflet margin:** entire  
**Leaflet shape:** oblong  
**Leaflet venation:** pinnate  
**Leaf type and persistence:** semievergreen

1. This document is adapted from Fact Sheet ST-434, a series of the Environmental Horticulture Department, Florida Cooperative Extension Service, Institute of Food and Agricultural Sciences, University of Florida. Publication date: October 1994.

2. Edward F. Gilman, associate professor, Environmental Horticulture Department; Dennis G. Watson, associate professor, Agricultural Engineering Department, Cooperative Extension Service, Institute of Food and Agricultural Sciences, University of Florida, Gainesville FL 32611.
Leaflet blade length: less than 2 inches
Leaf color: green
Fall color: no fall color change
Fall characteristic: not showy

Flower
Flower color: yellow
Flower characteristics: pleasant fragrance; summer flowering; very showy

Fruit
Fruit shape: elongated; pod
Fruit length: 3 to 6 inches
Fruit covering: dry or hard
Fruit color: purple; red
Fruit characteristics: does not attract wildlife; fruit, twigs, or foliage cause significant litter; showy

Trunk and Branches
Trunk/bark/branches: routinely grown with, or trainable to be grown with, multiple trunks; grow mostly upright and will not droop; not particularly showy; tree wants to grow with several trunks but can be trained to grow with a single trunk; no thorns
Pruning requirement: requires pruning to develop strong structure
Breakage: susceptible to breakage either at the crotch due to poor collar formation, or the wood itself is weak and tends to break
Current year twig color: brown
Current year twig thickness: medium; thick

Culture
Light requirement: tree grows in full sun
Soil tolerances: clay; loam; sand; acidic; occasionally wet; alkaline; well-drained
Drought tolerance: high
Aerosol salt tolerance: low
Soil salt tolerance: poor

Other
Roots: surface roots can lift sidewalks or interfere with mowing
Winter interest: no special winter interest
Outstanding tree: not particularly outstanding
Invasive potential: little, if any, potential at this time
Figure 3. Foliage of Yellow Poinciana.

**Pest resistance:** no pests are normally seen on the tree

**USE AND MANAGEMENT**

Yellow Poinciana is a wonderful shade or specimen tree for a large landscape, especially when in full bloom, and it can make a street tree as long as it receives regular pruning to control its weedy, somewhat unkempt habit. Its large size makes it a natural for the wide open spaces of large lawns or city parks.

Trees can be grown with a single or multiple trunk. Trunks or branches of multi-trunked trees should be well-spaced along a central stem and not allowed to grow larger than half the diameter of the main stem. This will increase wind hardiness. Plant only single-trunked trees along streets and other public areas to ensure a durable plant.

A fast-growing tree, Yellow Poinciana grows best in full sun on any well-drained soil. Temperatures in the high 20’s cause the leaves to drop but these are quickly replaced. Even though Yellow Poinciana will develop a very large trunk, its shallow, surface roots make it susceptible to being blown over during a hurricane’s severe windstorms. Locate the tree about ten feet from sidewalks or pavement so the large surface roots don’t cause damage.

*Peltophorum inerme* is grown in the southern part of Florida (USDA hardiness zone 10b) and in the tropical areas, and is not as hardy. *Peltophorum dubium* is cold hardy to Orlando (USDA hardiness zone 9b).

Propagation is by cuttings or seed. Seeds must be scarified and seedlings will bloom in four to five years.

**Pests and Diseases**

No pests or diseases are of major concern.
